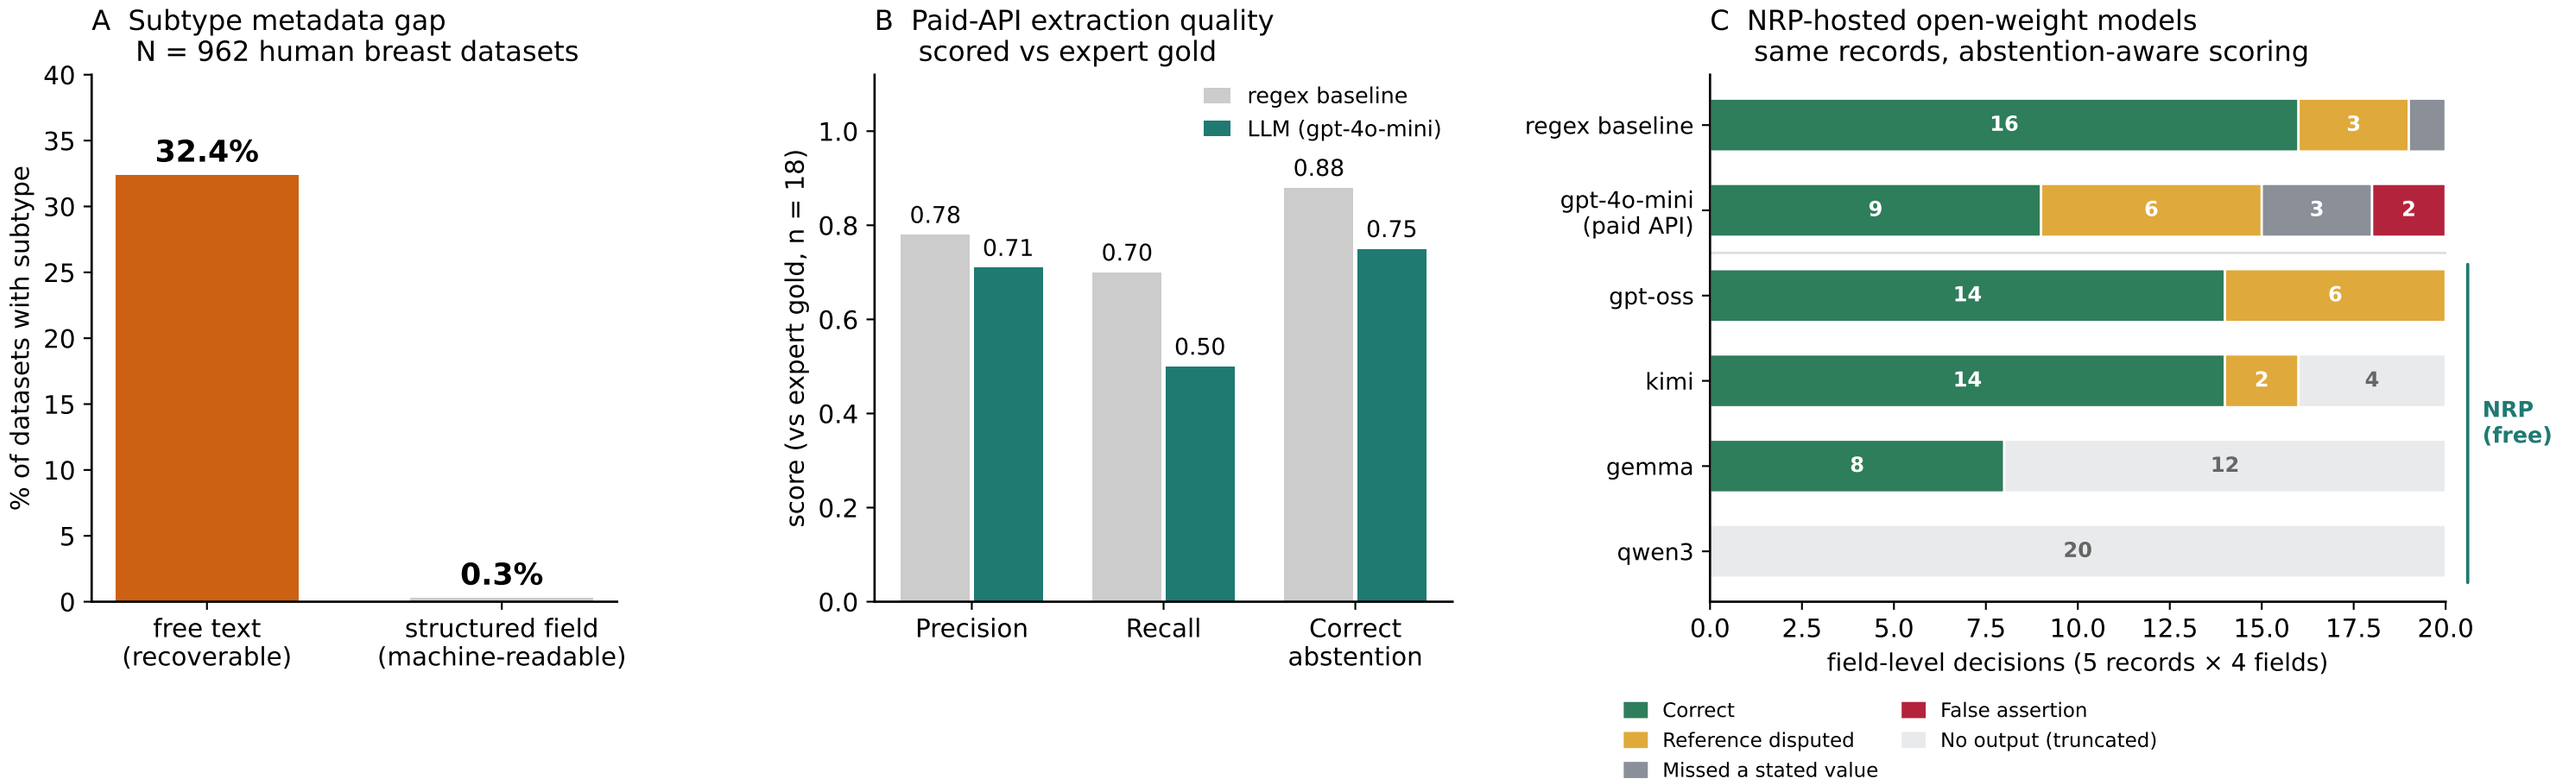
Preliminary data: subtype is recoverable from text, and free NSF-hosted models abstain where a paid API over-calls



Panel C, PXD000499 (an ERβ-biology study stating no sample subtype): gpt-4o-mini returned ER-positive / HR+ HER2− at confidence 1.0; regex, gpt-oss and kimi all abstained.
Panels A–B unchanged. Panel C n is small and the qwen3/gemma no-output cells are max_tokens truncation, not model failure; reference labels for PXD000029 and PXD000246 are under adjudication.
